

Consolidated Pumps Ltd

T-KIT SWITCHMATIC

Electronic pressure switch + 3 ways fitting + non-return valve + complete pump protection. Patented Model.

T-KIT Switchmatic is an electronic pressure switch integrated in a 3-ways fitting with a digital pressure gauge. It can manage the start and stop of single-phase electric pumps up to 3 HP (2,2 kW). Cut-in and cut-out pressure implementation can be set easily and accurately through a user-friendly control panel. Wiring is carried out identically to a conventional electromechanical switch. It can operate as a

differential pressure switch and as an inverted pressure switch. There is an internal non-return valve. T-KIT Switchmatic 2 includes also instantaneous current lecture. This patented version controls and manages the overcurrent, the dry-running protection of the pump and fast cycling protection.
